

thesis review 2004

As a culminating experience for the master's degree program, the thesis attests to the highest level of the student's academic, scholarly, and creative abilities. Each student works under the guidance of a faculty thesis chair and committee. The resulting thesis is viewed with pride as a reflection of the scholarly promise of the student and a commitment to excellence for the university. This summer and fall 2004, 51 students completed theses in areas as varied and original as the students themselves. What follows is a complete list of Summer/Fall 2004 theses by college/school and some research highlights.

Sholeh Shahrokhi (read [ABSTRACT](#)) ▶

Evaluation of Methods Used to Calculate the Estimated Energy Expenditure for Physiologically Stressed Obese Patients
(Chair: Sandra Witte)

Sholeh Shahrokhi's belief that obese patients should not be excluded from aggressive and adequate nutrition support during acute and critical care was the foundation for her thesis. Using a case series approach, her study determined the most reliable method of calculating energy requirements for physiologically stressed obese patients. With over 30 million Americans now considered obese, Sholeh Shahrokhi's thesis offers timely original insight into a national problem.

Industrial Techology

Mario Rosso (read [ABSTRACT](#))►
The Impact of Expert Systems on the Performance
of Corporate Strategic Decision Making
(Chair: Tony Au)

Are artificial intelligence and Expert Systems (ES) now more favored than human intuition and judgment when it comes to executive decision-support activity? Mario Rosso found out in this unique thesis that asked this and other questions via Web-based survey of 68 randomly sampled executive-level decision makers.

Kerry Workman-Ford (read [ABSTRACT](#))►

Evidence for Pre-K/T Extirpation of Marine Reptiles and Dinosaurs of the Moreno Formation, Fresno County, California

(Chair: Fraka Harmsen)

It was a busy year for the graduate program in Chemistry. Students completed seven theses in 2004, six of those in the summer and fall terms. Ray Dickinson, Saddam Muthana, and Gail Walker investigated air pollution in their theses, contributing to the body of work aimed at improving air quality in the Valley and beyond.

Kerry Workman-Ford's thesis is one of very few to examine the stratigraphic positions of marine reptiles and dinosaurs in Central California. Her work investigated the extinction of these organisms, specifically examining the timing of their extirpation and the factors evoked to explain their demise.

Psychology

Keri Machado (read [ABSTRACT](#))
Self-Modeling as a Treatment for Decreasing Disruptive Classroom Behavior in a 12-year-old Male Student
(Chair: Karen Carey)
