

Build a 2 car reciprocating elevated tramway between the SMC and Bulldog Stadium, with a center station at the College Union.

CURRENT CHALLENGE:

Parking and rapid access to campus facilities and sporting events.

PROPOSED SOLUTION:

Build a 2 car reciprocating elevated tramway between the Save Mart Center and Bulldog Stadium, with a center station at the College Union (yes, it is inline and half way between!). One would be the red car, one the white car, capacity maybe 40 persons each. Run it during campus hours to bring students in from remote parking, and to shuttle people between Bulldog Stadium and Save mart Center for events.

BENEFITS TO FRESNO STATE:

This would allow quick access to the center of campus from the remote lots at Save Mart Center. In addition, parking at both venues could be used during sporting events or concerts. Another value would be the easing of traffic congestion and saving of fuel and reduction in air pollution. This would also be a great image maker for the University.

ADDITIONAL INFORMATION:

Yes, this would be costly, but would be a great way to improve the transportation infrastructure. You did say Bold, right?
