

Solar Success

At Fresno State, we're powering bright ideas and earth-friendly solutions ... literally.

Our solar-power parking project with Chevron Energy Solutions is the largest of its kind at any American university. It shelters parking spots for more than 700 vehicles and converts the sun's energy into enough power to meet 20 percent of the university's electrical demand. That means cooler cars in the summer and lower campus energy costs.

Fresno State's bright idea is creating brilliant results.

FRESNO STATE
POWERING THE NEW CALIFORNIA
