

Our Universe in Focus

Since opening in 2000, Fresno State's Downing Planetarium has brought the universe to tens of thousands of school children, university students and community members.

Weekend programs developed by physics professor and planetarium director Dr. Steven White give visitors a glimpse of our solar system and beyond through a 16-inch telescope. On Dec. 7 and 8, the planetarium's "Season of Light" program will explore winter constellations and traditions around the world that illuminate Earth's dark season.

The Downing Planetarium at Fresno State gives us all out-of-this-world experiences.
