

Quake, Rattle and Roll

In California, earthquakes are a fact of life. At Fresno State, a facility that simulates earthquake effects is giving engineers and scientists new insights into how to protect life and property.

Under the direction of Dr. Thomas Attard, the Earthquake Modeling and Simulation Facility's "shaking table" gives researchers a valuable tool to better understand nature's seismic side. Future engineers develop preventive measures to make our office buildings, bridges and homes safer.

Fresno State engineering students are designing and building the future.

FRESNO STATE

POWERING THE NEW CALIFORNIA
