

MAKING WATER WORK

As director of the International Center for Water Technology at Fresno State, David Zoldoske oversees cutting-edge research to provide and preserve clean water supplies our world needs now and in the future.

Fresno State recently hosted its first International Water Technology Conference. Experts from eight countries reviewed emerging water technologies such as solar-powered pumps and computer-controlled irrigation systems, which can support farms and cities around the globe. Successful research and innovation are sparking creation of new and expanded water technology businesses throughout Central California.

David Zoldoske helps make Fresno State a world leader in water development and conservation. He doesn't see the glass as half empty; he's making sure it's always full.

This Week on Campus

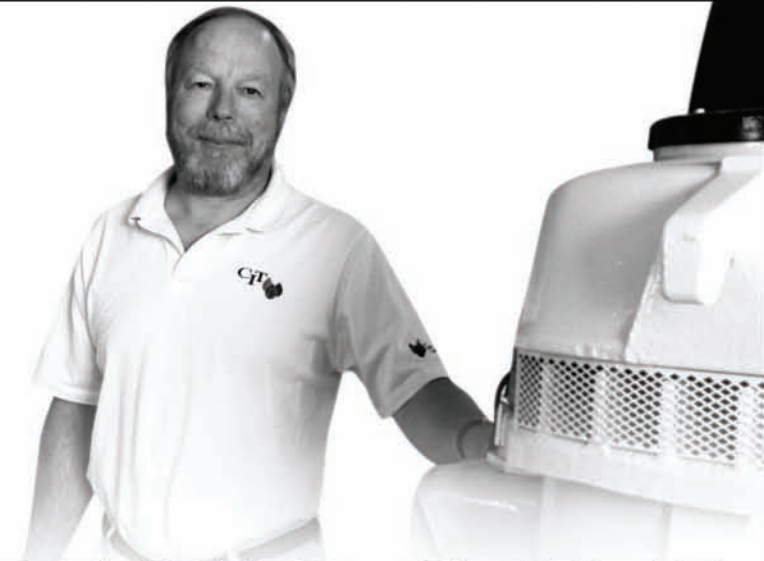

www.FresnoStateNews.com

Sept. 17 – 10 a.m. & 1 p.m.
