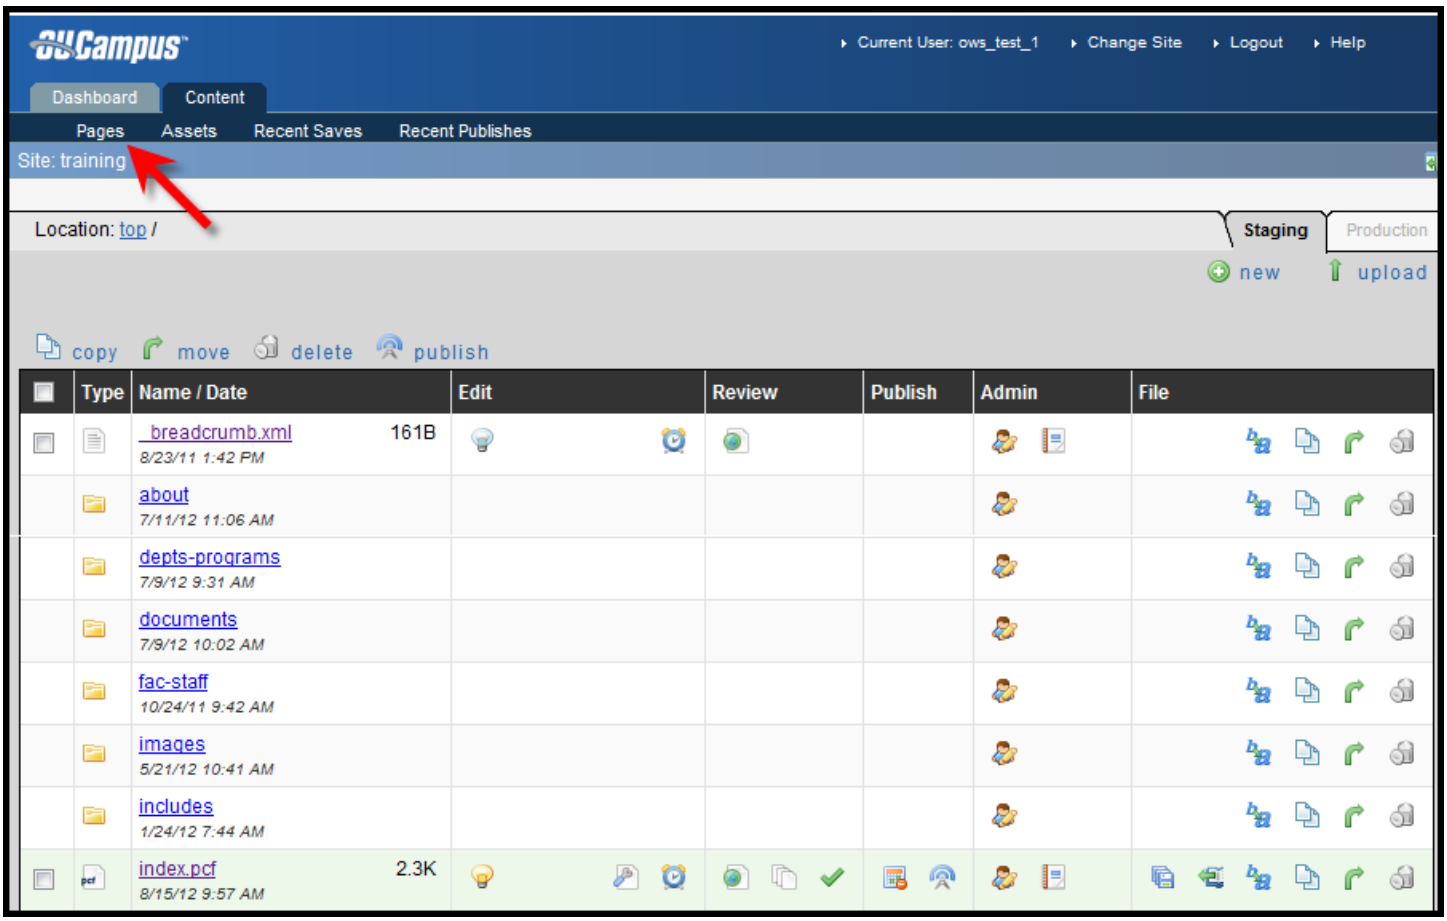
Content Tab

The Content tab has four sub-tabs: Pages, Assets, Recent Saves and Recent Publishes.

Pages Tab


The Pages tab displays the Pages list; it contains folders used to organize the site and pages within the site. In the Pages List you can perform actions on multiple pages such as publishing; view the Staging and Production server content and perform several actions while a page is checked out to you such as set a reminder, view the log; or edit the properties to name a few. Below is a screenshot of a Level 8 user's Pages List.
