Case Presentation for the Neurorelational Framework (NRF)

The Neurorelational Framework (NRF) is a knowledge translation framework that translates brain science into practice:

Three Core Concepts:
- Stress Resilience versus Toxic Stress
- “Serve & return” levels of high quality engagement
- Development of brain networks

Assess & Intervene:
- Step 1: Adaptive vs. toxic stress (roots to a tree)
- Step 2: Age appropriate vs. low levels of relational engagement (trunk of a tree)
- Step 3: Age appropriate developmental capacities vs. delays or disorders in brain networks (branches of a tree)

Reflective Practice

Five Core Concepts of RP:
- Professional use of ourselves
- Parallel process
- Working alliance
- Understanding the story
- Holding the baby in mind

NRF’s use of RP concepts:
- In context with cultural similarities/differences; parallel process & power differentials
- Our colors; our HHH; our four stories
- Use of our Hearts
- Holding the family system in mind – the parents, the child, the relationships

121. Self- and interactive regulation of the four brain systems, via inhibition and activation, resulting in coordination
Case Presentation for the Neurorelational Framework (NRF)

Brief Family History

Family Structure

Primary client was 19 months old
Referral through Primary Physician due to failing the MCHAT at 18 months
Parents married
Older sibling, 4 years old with Expressive Language delay, not connected to services

Cultural background: Latino family
Mother’s mother and sibling connected, provide fiscal and custodial resources
Father’s parents less connected – twice a year visits

Both parents have a history of intergenerational abuse and domestic violence
### Cultural Similarities & Differences w/Power Differentials

<table>
<thead>
<tr>

</tbody>
</table>

### Parallel Processes from the Home to the Practitioner Team

<table>
<thead>
<tr>
<th>Parent</th>
<th>Practitioners</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Mom was anxious underneath the red zone; she was hiding</td>
<td></td>
</tr>
<tr>
<td>• The holder of power keeps you safe; people will keep you safe.</td>
<td></td>
</tr>
<tr>
<td>• Mom was going to get her needs met on her own; by being assertive or aggressive, she was going to get her needs met</td>
<td></td>
</tr>
<tr>
<td>• Mom was control it by going back into “fake green”</td>
<td></td>
</tr>
<tr>
<td>• Father felt genuine in sharing his trauma history</td>
<td></td>
</tr>
<tr>
<td>• J felt combo zoned with concern; following parent’s lead and never knew when mom was going to go red – it would come as a quick surprise</td>
<td></td>
</tr>
<tr>
<td>• J felt she accommodating to parents’ lead but not certain that was the “real” need of the family; could feel more was needed but not sure what!</td>
<td></td>
</tr>
<tr>
<td>• Both practitioners are feeling some “faking green” as well. Concerned about safety and hearing the trauma story</td>
<td></td>
</tr>
</tbody>
</table>

### Case History Timeline

- **Jan, 2015** – initial IFSP; parents main concerns are child is not walking; failed MCHAT; Joshlynn and CVRC case worker begin case  
- **Feb, 2015** – Cathy joins case as co-treater; begin the use of 4 Colors; OT/PT/SLP begin consultative services  
- **May, 2015** – ABA services begin due to failed MCHAT  
- **June, 2015** – Parents separate; Majorie Mason becomes involved with legal services  
- **Aug, 2015** – ABA services dropped; move from intensive to non-intensive  
- **Sept/Oct, 2015** – inconsistent attendance; ABA services are dropped (STARS – KC Kids)  
- **Nov, 2015** – transition IFSP to show that client has not made developmental progress; CVRC case brought back into services through supervisor  
- **CVRC supervisor advocates for family and intensive ABA is reinstated for both parents’ in their homes plus day care**  
- **Jan, 2016** – CYS connects and provides services to mom with older son  
- **All of these services continue until his 3rd birthday; no longer ASD eligible at this time**
Case Presentation for the Neurorelational Framework (NRF)

Macro Level Overview

**Early Care & Education**

- **Mental Health**
  - Motor delays – gross & fine motor, PT consultation
  - Day care setting after parents separate
  - KC Kids – Joshlynn

- **Basic Needs/ Medical**
  - Failed MCHAT with ABA
  - PTSD
  - Constricted play
  - Cathy & CYS
  - Torticollis
  - MRSA
  - Allergies
  - Hypermobile joints
  - Regulatory delays – feeding delays

- **Developmental Disabilities**
  - CVRC lead agency
  - Speech delays with SLP consultation
  - Sensory – over & under reactive with OT consultation

**Strengths & Vulnerabilities in the 4 Brain Systems**

The higher the number of risk factors, the higher the vulnerability. For case planning, areas where grandma is less vulnerable and child is more vulnerable, services should be directed to support her in that system. If mom is vulnerable in a system, grandma should be directed to support her in that system.

**ACES for Mom and Child**

**ACE for Mom - 4**
- Physical abuse
- Emotional abuse
- Exposure to Domestic Violence
- Separation or loss of a parent

**ACE for Child - 4**
- Physical abuse
- Exposure to Domestic Violence
- Emotional Neglect
- Separation or loss of a parent
Case Presentation for the Neurorelational Framework (NRF)

Sleep

Sleep Cycles: No one is sleeping well. The family uses the TV to help fall asleep. Someone waking up every one to two hours.

The Colors Tell Us The Story!

- The discussion of the colors allowed for Father’s courage to share his trauma story
- The colors are a way to say “We can hold this part of your story, I’m not just your child’s teacher.”
- Without the colors we wouldn’t have gotten to their story
- Colors neutralize the shame associated with one’s trauma story
- Journey of the Colors:
  – help them understand their story so they can make sense of their story – the story of the colors moves along –
  – from being shared to being able to think about it and
  – then to find what they can or want to do about their stress colors

Child Pie with Dad Baseline

- Green = 0%
- Red = 10%
- Blue = 50%
- Combo = 40%

- Often whining in high pitched tone
- In constant motion
- Immediatley shuts down when Dad gets into his space

Anxious

Family Stress Patterns

We hope to see an upward curve over time indicating that intervention is having a positive impact on family functioning.

Levels of Engagement & Functional Capacities

The lower the functional capacity, the better the functioning. As we can see in this dyad, they have not mastered any of the levels of age appropriate social and emotional functioning. Case planning should bear in mind that the dyad is not functioning at age appropriate social emotional functioning.

Information gathered from the "Parent-Child Relationship Milestones".
Following the Lead into the Deeper Need

EI - sets goals by following the parent's lead

• First set of goals: motor - needing to walk (he was walking on his knees)
• Second set of goals: language delay and social-emotional - she wanted the boys to play games together

What's written as a goal gets transformed into the need when you allow for the emotional space

• Third set of goals: despite using sensory-motor strategies, at review, child had made no developmental progress
• When parents/child are compliant with no change OR "non-compliant" with no change, go back to the roots of the tree - which was survival mode for this family
• Truth revealed: the real need was for safety; what looked like ASD was being driven by being under threat with blue zone (dissociation)

Triggers & Toolkits for Child

Our family circulating

Our community

Comments from our Supervisors of practitioners involved in this process

- Katie Crask, Marjorie Mason
- Shannon Dicks, CVRC
- Jim Pryce, Comprehensive Youth Services

Supporting the messiness of our interdisciplinary work and using our relationships to work it through!

Reflections

- How did your individualized services assist this family—what did you do that supported this family perhaps differently than maybe what is done typically?
- What did that mean for your agency? your stressors, your successes
- How did or does the NRF influence/change/inform your work?
- What does it mean to a family when we have continuity of a common language?
- What are “next steps” in terms of implementing the NRF for your agency?

Connie Lillas, PhD, MFT, RN
infantmentalhealth@earthlink.net

Triggers & Toolkits for Child & Parent

**Triggers**

**Executive**
Mom’s freeze interrupted her being able to make cause/effect links

**Toolkits**

**Executive**
- Psychoeducation: specific information around the enactment was different than "noncompliance" or "just being mad" – he was taking over his father’s role in how one expresses getting needs met.
- Trauma story: confusion "want" and "need" – everything becomes the need. The reaction to not getting the puzzle piece is the same as not getting fed when you are hungry.
- Internalized oppression: family culture is one of dominance and submission which can be carried as a secret. There a reversal of safety and threat – so what is threatening and staying vigilant is safety; and what is safety and getting to green is threatening. One has to slowly be walking through that process as one moves from physical and emotional abuse to safety.
- A “strength-based” approach can rush it, trying to get to green too quickly. Having to stay steady with heart, hand, and head skills; needing to have MH support on the team with EI.

---

**Green** = 60%
**Red** = 10%
**Blue** = 20%
**Combo** = 10%

---

Child Pie at Exit with Mom & Brother

- Green = 60%
- Red = 10%
- Blue = 20%
- Combo = 10%

---

Levels of Engagement & Functional Capacities

The lower the functional capacity, the better the functioning. As we can see in this pie, they have an immense amount of social emotional functioning. Case planning should be based on that the dyad is not functioning at an appropriate social emotional functioning.

---

**Information gathered from the 'Parent-Child Relationship Milestones'.
Using the NRF in our Community,
Take Home Messages

- We always start with the heart – relationship based work AND a hand is needed to guide and direct AND it cannot be done without reflection
- It’s a process to shift to include trauma-informed care across all of our systems into coordinated care
- Cannot grow without ruptures and repairs occurring on the team.
- Unlearning and learning requires this process; cannot go around it, you have to go through it
- You don’t have to do this perfectly you just have to start using this with your families. Start with the colors!

Look at what we did!
Panel Discussion with Drs. Batts & Lillas

- Celebrating our successes!
  - What items from the NRF with Cultural Awareness (Relevance System) can we reflect on as a community? as a team? personally?
  - What stood out for you?
  - What surprised you?
  - What were challenges in applying the NRF?
  - What were successes in applying the NRF?
- Panel and discussion with the large group/small group?

Thank you!
