

## Worksheet 12.1. Interpersonal Modes that Support Coordination or Lead to Load Conditions

Interpersonal Modes That Support Coordination		
Hand Directive Mode/Assertive Self	Head Reflective Mode/Private Self	Heart Responsive Mode/Giving Self
Parent takes the lead	Parent takes observing stance	Parent follows the child's lead
Parent can stand up for own needs in relation to others' needs, modeling this stance when contextually appropriate	Parent can self-reflect on personal meanings, using hindsight, insight, and foresight, modeling this reflective process when contextually appropriate	Parent can give to others and shift beyond own needs, modeling this shift when contextually appropriate
Child asserts needs, wishes, desires	Child can wait and observe	Parent provides warmth and engagement
Parent provides structure	Parent can patiently gather information	Child follows the parent's lead
Parent sets boundaries, limits, and logical consequences in a firm and clear way	Parent can offer a neutral stance and can contain own reactions; is thoughtful of the big picture; makes appropriate cause-effect links; is fair, logical	Both parent and child listen while the other is talking
Parent provides expectations	Parent guides and models problem-solving skills	Both parent and child can offer mirroring and empathy when appropriate
Mutual respect for needs is present	Mutual willingness to participate in problem-solving	Mutual empathy is present
Interpersonal Modes That Can Contribute to Load Conditions		
Demanding	Detaching	Overaccommodating or Anxiously Controlling
<p>Parent is consistently harsh with discipline</p> <p>Parent becomes increasingly rigid under pressure</p> <p>Too demanding (either child or parent or both)</p> <p>Explosive reactions (either child or parent or both)</p> <p>Reactions frequently escalate (either child or parent or both)</p> <p>Lacks empathy (either child or parent or both)</p> <p>Prone to abuse others (e.g., parent violates child's boundaries with harshness; child finds pleasure in harming others (or pets))</p>	<p>Parent is consistently avoidant</p> <p>Parent becomes increasingly unresponsive under pressure</p> <p>Parent remains detached toward child even when need is pressing</p> <p>Too cut off from emotions (either child or parent or both)</p> <p>Too detached (either child or parent or both)</p> <p>Shows pervasive indifference towards any relationship</p> <p>Lacks empathy and is disengaged (either child or parent or both)</p> <p><b>Lillas &amp; Turnbull, 2009</b></p>	<p>Parent is consistently too permissive</p> <p>Parent "caves" under pressure</p> <p>Parent is chronically overanxious</p> <p>Parent is chronically overprotective of child</p> <p>Anxiously tries to please</p> <p>Anxiously shadows adult figure; clingy</p> <p>"Co-dependent" relationship</p> <p>Prone towards poor boundaries (e.g., adult placates abusive spouse; child complies with bullies)</p>

**Table 9.3. Clinical Modes of Interaction and Use of Self**

<b>Therapeutic Modes of Interaction with Families</b>		
<b>Heart Responding</b>	<b>Hand Directing</b>	<b>Head Reflecting</b>
<b>COORDINATION</b>		
Follows the child/parent's lead	Therapist provides the lead or coaches a process	Therapist stands back
Allows the process to unfold; therapist may be "hands-off" in terms of providing directives	The process is guided by some type of structure from the therapist; therapist is "hands-on"	The process is co-defined by therapist and client and structured as it unfolds
Contains and mirrors feelings	Sets boundaries and limits	Stays even-handed, impartial while collecting information
Provides empathy, tracks emotional patterns	Provides direction, goals, guidance, skill building	Provides validation of experience and analysis of behavior patterns
Handles tender feelings; warm and engaging behaviors; tolerates closeness	Handles tough feelings; tolerates conflict	Handles staying neutral; tolerates reserve
Can repair a rupture	Can tolerate a rupture	Can problem-solve a rupture
<b>Philosophical Traditions Underlying Clinical Modes</b>		
Humanism - Heart	Behaviorism or Existentialism - Hand	Rationalism - Head
Examples of clinical models with a humanistic undertone: <ul style="list-style-type: none"> <li>• Susan McDonough's Interactive Guidance (follow the parent's lead)</li> <li>• Victor Bernstein's Work</li> <li>• Floortime (follow the child's lead)</li> </ul>	Examples of clinical models with a behavioral undertone: <ul style="list-style-type: none"> <li>• PCIT</li> </ul> Examples of clinical models with an existential undertone: <ul style="list-style-type: none"> <li>• DIR, Floortime</li> </ul>	Examples of clinical modes with a rationalistic undertone: <ul style="list-style-type: none"> <li>• Child-Parent Psychotherapy</li> </ul>
<b>RISK FACTORS for LOAD CONDITIONS</b>		
Overly permissive	Controlling, Demanding	Emotionally detached
Process lacks a coherent focus, chaotic	Process is so predetermined that relevant information is missed, rigid	Process stays at a meta-level, lacks real-world relevance, detached
Indulgent	Authoritarian	Overly intellectual
Highly accommodating	Highly confrontational	Highly impersonal Lillas & Turnbull, 2009
