General Electric Healthcare

The Physics of Industry: my journey from Fresno State to General Electric

Abstract

Sometimes mapping out your career path can seem as daunting as mapping the human brain using a superconducting magnet, magnetic field gradients, and radio frequency pulses. Once upon a time I sat in the same seat you are sitting in today. At that time, I had no idea that someday I would be working for General Electric writing brain mapping software applications for MRI machines. It's not always easy to accurately map out your ten year plan and I'm definitely proof of that. In this talk I'll describe my journey from Fresno State to General Electric, while providing some insight for you to use in your journey and a perspective of what it's like to work in an industry setting.

3:00 p.m. - 4:00 pm, Friday, March 10th 2017
