Required / Recommended Personal Protective Equipment:					
JOB STEPS	POTENTIAL HAZARDS			RECOMMENDED ACTION	
Break down the specific job into steps or tasks. This identifies potential hazards that employees may face. A change in activity, direction, or movement will determine where a step starts or finishes. List all steps needed to perform the job.	cause environment of the cause	Identify all hazards - those caused by conditions, the environment, or associated with the job procedure. Hazards are potential dangers. Ask yourself these questions to identify hazards regarding each step. Is the environment hazardous to safety and/or health? For example, is there exposure to radiation, heat, dust, gases,		etermine what actions or rocedures are needed to siminate or reduce hazards that an lead to an accident, injury, or ork related illness. rst, try to (1) engineer the azard out, (2) provide safety evices or guards, (3) provide ersonal protective equipment PPE), (4) provide training, (5) ustain decent housekeeping actices, (6) exercise effective agonomic principles.	
	-	ors, or fumes. there tripping, slipping, or	Pr	ovide a recommended action	

falling hazards?

Is there potential for strains from pushing, pulling, bending, twisting, or lifting?

Can body parts be caught by, in, or between objects?

Can the employee strike against, be struck by, or have contact with objects that may cause injury?

or procedure for each hazard.
Serious hazards should be
eliminated and a new JSA
completed to represent the
changed situation.

Describe the safe operating procedures to eliminate the hazards by starting statements with action words, i.e. "Wear safety glasses while grinding, or Lift using leg muscles."

List all required PPE for each step.
