Can We “Vaccinate” Students Against Believing Nonsense?

Evaluating Education for Critical Thinking

Drs. Katie Dyer and Ray Hall will discuss research conducted here on the Fresno State campus about student belief in science and pseudoscience. They are working to assess the impact of critical thinking and research methods classes. They will highlight belief in pseudoscience related to children and families, such as the anti-vax movement.

*Sponsored by the Department of
Child, Family, and Consumer Sciences
California State University, Fresno
