

POSITION: HARVEST LAB TECH

JOB LOCATION: SANTA ROSA, CA

COMPANY: DE LOACH VINEYARDS

EMPLOYMENT PERIOD: AUGUST THROUGH NOVEMBER, EXACT DATES TBD

COMPENSATION: DOE

COMPANY DESCRIPTION: The heritage of De Loach Vineyards stretches back to the Russian River Valley AVA's establishment in the 1970s. As pioneers of the appellation, De Loach became an icon for Russian River Valley Pinot noir. Today the winery is owned by Boisset Family Estates, and produces mainly Pinot noir, Chardonnay, and Zinfandel. Boisset Family Estates is a dynamic company producing many labels across multiple California facilities.

KEY OUTPUTS: This position will report directly to the enologist, but will also interface with the De Loach winemaking and cellar staff. This person will provide analytical throughput of grapes, juices, musts, and finished wines while following sound analytical practices of appropriate sampling, titrant standardization, instrument calibration, and cleanliness. Candidates should be available to work some overtime (including one weekend day per week) during the peak harvest period.

QUALIFICATIONS: Laboratory experience is required, either academic or professional. Wine-specific analytical experience is ideal. Those who are detail-oriented, analytically-minded, and flexible to changing priorities will be best suited to the position. Applicants from outside the U.S. must be able to secure all of their legal documentation necessary to work here. International internship coordination for this position is available through caep.org.

SUBMISSION: Resumes accepted, and I will do my best to confirm their receipt.
