

Psychology

The Field of Psychology

Psychology is the scientific study of human behavior and mental processes and the application of the resulting knowledge to a variety of areas: mental and physical health, education, business, and many others. Psychology covers topics such as the biological bases of behavior, perception, learning, thinking, motivation, personality, abnormal psychology and adjustment, and social behavior. Psychology is an area for students interested in studying human behavior from a scientific perspective and is appropriate for students pursuing careers in psychology, social services, business, law, medicine, and many other fields.

The Department of Psychology

The Psychology Department provides an undergraduate major that can be tailored as a strong liberal education, as a pre-professional degree, or as preparation for graduate study in psychology. The program gives considerable emphasis to psychology as an empirical science, including research design, data analysis and interpretation, and computer skills.

All full-time and some part-time members of the department hold Ph.D. degrees in psychology and some are licensed as psychologists for private practice by the state of California. The faculty represents a wide range of theoretical orientations and interests.

The department maintains a comprehensive test library and complete video facilities. Computer, observation, autism treatment, EEG, and testing laboratories are also available.

Careers in Psychology

Graduates in psychology find employment in business, education, clinical, and counseling vocations. Job categories include employment interviewer, personnel manager, market researcher, probation officer, and mental health worker.

Professional psychologists are employed by local, state, and federal governments as well as colleges and universities.

Other career opportunities are found in school systems, industry, or in private practice.

Future Education

A career as a community college teacher requires a master's degree. The master's degree can meet the educational requirements for many jobs in mental health, public schools, and other agencies.

The Ph.D. is necessary for private practice as a licensed psychologist and other careers in professional and industrial psychology.

High School Preparation

Students should meet California State University's admission requirements in terms of college preparatory course requirements, grade point average, and test scores.

College Program

Students should consult the university's *General Catalog* for specific major and university requirements. Community college transfers should consult their catalogs to ensure that courses taken are CSU transferable (baccalaureate level).

General Education

Students should complete as many of the Fresno State General Education requirements as possible during the freshman and sophomore years, whether they are attending Fresno State or a community college. Community colleges can certify up to 39 of the units required in Fresno State's General Education pattern.

Special Programs

Psychology Advising Services
-Assists students with course scheduling and planning and provides direction regarding career preparation.

Psychology Honors Programs
-Provides students with professional development and advanced research experience.

Applied Behavior Analysis Track - Provides coursework in designing, implementing, and evaluating behavior change programs for children and adults; classes in the track meet coursework requirements for national certification as a Board Certified Associate Behavior Analyst (BCABA).
